

# SY SEM-I

Walchand College of Engineering, Sangli (Government Aided Autonomous Institute)					
AY 2021-22					
Course Information					
<b>Programme</b>	B.Tech. (Information Technology)				
<b>Class, Semester</b>	Second Year B. Tech., Sem III				
<b>Course Code</b>	SMA201				
<b>Course Name</b>	Probability and Statistics				
<b>Desired Requisites:</b>	Engineering Maths				
Teaching Scheme		Examination Scheme (Marks)			
<b>Lecture</b>	2 Hrs/week	<b>T1</b>	<b>T2</b>	<b>ESE</b>	<b>Total</b>
<b>Tutorial</b>	-	20	20	60	100
<b>Practical</b>	-				
<b>Interaction</b>	-	<b>Credits: 2</b>			
Course Objectives					
<b>1</b>	To understand the basic concepts of probability and statistics for mathematical estimations.				
<b>2</b>	To study different mathematical models based on statistical.				
<b>3</b>	To analyze statistical and fuzzy systems.				
Course Outcomes (CO) with Bloom's Taxonomy Level					
At the end of the course, the students will be able to,					
<b>CO1</b>	Apply knowledge of statistical design for engineering problem				Apply
<b>CO2</b>	Modify real life problems into mathematical model				Apply
<b>CO3</b>	Analyze the statistic and distribution of data				Analyze
Module	Module Contents				Hours
I	<b>Random Variable:</b> Discrete random variable, Continuous random variable, probability mass function, cumulative distribution function, bivariate discrete random variable, joint probability distribution, joint distribution function of two dimensional discrete random variable.				4
II	<b>Probability Distribution :</b> Gaussian distribution, Exponential distribution, Uniform distribution.				4
III	<b>Statistical Methods:</b> Measure of Central tendency, Measure of dispersion, Range, Quartile deviation, Mean deviation, variance, Standard deviation, Coefficient of variance, moments, Symmetry, Skewness, Kurtosis, and Types of Kurtosis.				5
IV	<b>Population and Sample:</b> Introduction, Types of Characteristics: Attributes and variables, Collection and Organization of data, Population and sample, Methods of sampling.				3
V	<b>Exact Sampling Distribution:</b> Chi- square distribution: definition and its properties, Student t- distribution: definition and its properties.				4
VI	<b>Test of Hypothesis</b> Random samples, parameter, statistic, standard error of statistic, null and alternative hypothesis, critical region, level of significance, Types of error, large sample test, Small sample test				6

CO-PO Mapping														
	Programme Outcomes (PO)												PSO	
	1	2	3	4	5	6	7	8	9	10	11	12	1	2
<b>CO1</b>	1												1	
<b>CO2</b>	2				2									
<b>CO3</b>					3									
The strength of mapping is to be written as 1,2,3; Where, 1:Low, 2:Medium, 3:High Each CO of the course must map to at least one PO.														

Assessment
The assessment is based on 2 in-semester examinations in the form of T1 (Test-1) and T2 (Test-2) of 20 marks each. Also there shall be 1 End-Sem examination (ESE) of 60 marks. T1 shall be typically on modules 1 and 2, T2 based typically on modules 3, 4 and ESE shall be on all modules with nearly 50% weightage on modules 1 to 4 and 50% weightage on modules 5, 6.

Assessment Plan based on Bloom's Taxonomy Level				
Bloom's Taxonomy Level	T1	T2	Lab ESE	Total
Remember	Not Allowed	Not Allowed	Not Allowed	Not Allowed
Understand	5	5	10	20
Apply	10	5	15	30
Analyze	5	5	15	25
Evaluate		5	15	20
Create			5	5
<b>Total</b>	<b>20</b>	<b>20</b>	<b>60</b>	<b>100</b>

Walchand College of Engineering, Sangli (Government Aided Autonomous Institute)					
AY 2021-22					
Course Information					
Programme	B.Tech. (Information Technology)				
Class, Semester	Second Year B. Tech., Sem III				
Course Code	5IT201				
Course Name	Discrete Mathematics				
Desired Requisites:	Fundamentals of algebra and calculus.				
Teaching Scheme		Examination Scheme (Marks)			
Lecture	3 Hrs/week	T1	T2	ESE	Total
Tutorial	-	20	20	60	100
Practical	-				
Interaction	-	Credits: 3			
Course Objectives					
1	To provide students with an overview of sets and function relations				
2	To introduce the concepts use graphs and trees data structures				
3	To discuss the basics of Boolean algebraic properties				
Course Outcomes (CO) with Bloom's Taxonomy Level					
At the end of the course, the students will be able to,					
CO1	Apply the operations of sets and proposition to solve applied problems				Apply
CO2	Apply recursive functions and solve recurrent function				Apply
CO3	Construct trees and graph to modulate real-time problem				Analyze
Module	Module Contents				Hours
I	<b>Sets and Proposition:</b> Introduction, Combinations of Sets, Finite and Infinite Sets, Uncountably Infinite Sets, Mathematical Induction, Principle of Inclusion and Exclusion, Multisets. Propositions, Logical Connectives, Conditional and Biconditionals, Well-Formed Formulas, Tautologies, Logical Equivalences, Theory of Inference for Statement Calculus, Predicate Calculus, The Statement Function, Variable and Quantifiers, Free and Bound Variable, Inference Theory of Predicate Calculus, Methods of Proof, Euclidean Algorithm.				7
II	<b>Relation and Functions:</b> Introduction, A Relational Model for Data Bases, Properties of Binary Relation, Warshall's Algorithm, Equivalence Relation and Partition, Partial Ordering Relation and Lattices, Chain and Antichains, A Job-Scheduling Problem, Compatible Relation, Functions, Composition of Functions, Invertible Functions.				6
III	<b>Graphs and Planar Graphs:</b> Introduction, Basic Terminologies, Multigraphs and Weighted Graphs, Digraphs and Relation, Representation of Graphs, Operations on Graphs, Paths and Circuits, Graph Traversal, Shortest Path in Weighted Graphs, Eulerian Paths and Circuits, Hamiltonian Paths and Circuits, Traveling Salesperson Problem, Factors of Graph, Planar Graph, Graph Colouring.				7
IV	<b>Trees and Cut-Sets:</b> Trees, Rooted Trees, Path Length in Rooted Trees, Prefix Codes, Binary Search Tree, Spanning Trees and Cut-Sets, Minimum Spanning Trees, Krushkal's Algorithm, Prim's Algorithms, Transport Network.				7
V	<b>Algebraic Structures:</b> Introduction, Groups, Subgroups, Generators and Evaluation of Powers, Cosets and Lagrange's Theorem, Permutation Groups, Codes and Group Codes, Isomorphisms and Automorphisms, Homomorphisms and Normal Subgroups, Rings, Integral Domains, and Fields, Ring Homomorphisms, Polynomial Rings and Cyclic Codes.				7

VI	<b>Boolean Algebras:</b> Lattices and Algebraic Systems, Principle of Duality, Basic Properties of Algebraic System Defined by Lattices, Distributive and Complemented Lattices, Boolean Lattices and Boolean Algebras, Uniqueness of Finite Boolean /expressions	6

Course Information					
<b>Programme</b>	B.Tech. (Information Technology)				
<b>Class, Semester</b>	Second Year B. Tech., Sem III				
<b>Course Code</b>	SIT 202				
<b>Course Name</b>	Data Structures				
<b>Desired Requisites:</b>	Programming in C including pointers and File Handling				
Teaching Scheme		Examination Scheme (Marks)			
<b>Lecture</b>	3 Hrs/week	<b>T1</b>	<b>T2</b>	<b>ESE</b>	<b>Total</b>
<b>Tutorial</b>	-	20	20	60	100
<b>Practical</b>	-				
<b>Interaction</b>	-	<b>Credits: 3</b>			
Course Objectives					
<b>1</b>	To introduce the concepts of structures and pointer				
<b>2</b>	To define the basic operation of link list, stack, queue etc				
<b>3</b>	To discuss use of data structures for solving real time applications				
Course Outcomes (CO) with Bloom's Taxonomy Level					
At the end of the course, the students will be able to,					
<b>CO1</b>	Describe the fundamental concepts of structure for dynamic memory allocation				Understand
<b>CO2</b>	Experiment the use of linear and non-linear data structures				Apply
<b>CO3</b>	Identify need of recursion and execute recursive algorithms				Analyze
Module	Module Contents				Hours
I	<b>Introduction:</b> Basic Concepts: Algorithm, Pseudo-code, ADT, Data Structure, Algorithmic Efficiency, Recursion: Direct and Indirect recursion, analysis of recursive functions e.g. Towers of Hanoi, Ackerman's function, Introduction to Pointers, Arrays and Structures.				6
II	<b>Linked Lists:</b> Concept of linked organization, Singly linked list, doubly linked list and dynamic storage management, circular linked list, Operations such as insertion, deletion, inversion, concatenation, computation of length, traversal on linked list, Representation and manipulations of polynomials using linked lists				6
III	<b>Stacks and Queues:</b> Fundamentals stack and queue as ADT, Representation and Implementation of stack and queue using sequential and linked organization, Circular queue: representation and implementation, Application of stack for expression evaluation and for expression conversion, Backtracking, Stacks and Recursion, Priority queue Doubly Ended Queue.				7
IV	<b>Trees:</b> Basic terminology, binary trees and its representation, binary tree traversals (recursive and nonrecursive), operations such as copy, equal on binary tree, expression trees, General Trees, Binary Search Trees, Heaps and its operations.				7
V	<b>Graphs:</b> Terminology and Representation of graphs using adjacency matrix, adjacency list and adjacency Multi-list, Traversals Depth First and Breadth First, Minimum Spanning Tree				5

VI	<b>Searching &amp; Sorting Technique:</b> <b>Search:</b> Importance of searching, Sequential, Binary, Fibonacci search algorithms, <b>Sorting:</b> Internal and External Sorts, Insertion, Shell, Heap, Quick sort, Merge sort, Radix sort, Two-way merge sort <b>Hashing:</b> Hashing functions, overflow handling with and without chaining, open addressing: linear, quadratic, double, rehashing, <b>Indexing Techniques:</b> hashed indexes, Tree indexing – Btrees (concept only implementation not expected), File Handling.	8

Course Information					
Programme	B.Tech. (Information Technology)				
Class, Semester	Second Year B. Tech., Sem III				
Course Code	5 IT 203				
Course Name	Microprocessors				
Desired Requisites:	First year Information Technology Basic Electronics course.				
Teaching Scheme		Examination Scheme (Marks)			
Lecture	3 Hrs/week	T1	T2	ESE	Total
Tutorial	-	20	20	60	100
Practical	-				
Interaction	-	Credits: 3			
Course Objectives					
1	To introduce the fundamental principles of logic design				
2	To discuss the various operations of microprocessors				
3	To instruct the designing of assembly language programs				
Course Outcomes (CO) with Bloom's Taxonomy Level					
At the end of the course, the students will be able to,					
CO1	Discuss the concepts of digital logic to scheme the circuits				Understand
CO2	Utilize the architecture of microprocessors with instruction set				Apply
CO3	Study memory and input/output interface				Analyze
Module	Module Contents				Hours
I	<b>Digital Electronics:</b> Combinational logic & sequential logic design, excitation table, state transition diagram, system design.				6
II	<b>Processor basics &amp; 8085 microprocessor:</b> CPU organization, Introduction to processor technology, microprocessor architecture, single chip microcomputer, microcomputer systems. The 8085 MPU, parametric considerations, internal architecture, introduction to 8085 assembly language programming, 8085 instructions.				7
III	<b>Programming techniques &amp; interfacing:</b> Writing assembly language programs, debugging, looping, counting, indexing, arithmetic operations related to memory, counters & delays, stacks, Interrupts, I/O (USB) interface, data communication.				7
IV	<b>Introduction to 8086:</b> Functional & architectural comparison of 8085 & 8086, programming, implementing standard programming structures in 8086, string, procedure & macros.				6
V	<b>Introduction to 80386:</b> Features & architecture of 80836, Pin description, 80836 register set, special 80386 registers, 80386 Real mode memory segmentation, data types used in real mode, instruction format, addressing modes of 80386.				6
VI	<b>80386 Memory Segmentation:</b> Memory management through segmentation, address translation, protection in segmentation, introduction to protected mode				7

CO-PO Mapping														
	Programme Outcomes (PO)												PSO	
	1	2	3	4	5	6	7	8	9	10	11	12	1	2
CO1		1	2											
CO2				3	2									
CO3				2									2	

The strength of mapping is to be written as 1,2,3; Where, 1:Low, 2:Medium, 3:High  
Each CO of the course must map to at least one PO.

Assessment				
There are three components of lab assessment, LA1, LA2 and Lab ESE. IMP: Lab ESE is a separate head of passing. LA1, LA2 together is treated as In-Semester Evaluation.				
Assessment	Based on	Conducted by	Typical Schedule (for 26-week Sem)	Marks
LA1	Lab activities, attendance, journal	Lab Course Faculty	During Week 1 to Week 6 Marks Submission at the end of Week 6	30
LA2	Lab activities, attendance, journal	Lab Course Faculty	During Week 7 to Week 12 Marks Submission at the end of Week 12	30
Lab ESE	Lab activities, attendance, journal	Lab Course Faculty	During Week 15 to Week 18 Marks Submission at the end of Week 18	40

Week 1 indicates starting week of a semester. The typical schedule of lab assessments is shown, considering a 26-week semester. The actual schedule shall be as per academic calendar. Lab activities/Lab performance shall include performing experiments, mini-project, presentations, drawings, programming and other suitable activities, as per the nature and requirement of the lab course. The experimental lab shall have typically 8-10 experiments.

Assessment Plan based on Bloom's Taxonomy Level				
Bloom's Taxonomy Level	LA1	LA2	Lab ESE	Total

Lecture	-	LA1	LA2	Lab ESE	Total
Tutorial	-	30	30	40	100
Practical	2 Hrs/week				
Interaction	1 Hr/Week	Credits: 2			
Course Objectives					
1	To introduce basic paradigm of CPP				
2	To define basic concepts of OOP				
3	To discuss file handling and templates in CPP				
Course Outcomes (CO) with Bloom's Taxonomy Level					
At the end of the course, the students will be able to,					
CO1	Implement the object-oriented programming concept using C++				Apply
CO2	Demonstrate file handling using C++				Apply
CO3	Analyse virtual and pure virtual function & complex programming situations				Analyze
Module	Module Contents				Hours
I	<b>C++ Programming basics:</b> What is object oriented programming? Why do we need object oriented. Programming characteristics of object-oriented languages C and C++.Output using cout. Directives. Input with cin. Type bool. The setw manipulator. Type conversions. Returning values from functions. Reference arguments. Overloaded function. Inline function. Default arguments. Returning by reference.				2
II	<b>Object and Classes :</b> Introduction Creating a class and objects Defining member functions inside and outside class definition Nesting of member functions Private member functions Arrays within a class Memory allocation of objects Static data members and static member functions Array of objects ,Objects as function arguments Friend functions Returning objects Constructors Types of constructor Destructors				6
III	<b>Polymorphism:</b> Overloading unary operations. Overloading binary operators, data conversion, pitfalls of operators overloading and conversion keywords. Explicit and Mutable.				4
IV	<b>Inheritance-I:</b> Concept of inheritance. Derived class and based class. Derived class constructors, member function, inheritance in the English distance class, class hierarchies, inheritance and graphics shapes, public and private inheritance, aggregation: Classes within classes, inheritance and program development.				4
V	<b>Inheritance-II:</b> Multiple Inheritance, Multilevel Inheritance, Multilevel inheritance, Hybrid inheritance, Virtual Base class, Abstract classes				4
VI	<b>Templates:</b> Class Templates, Function templates, File read write in c++				6
List of Experiments / Lab Activities					

<ol style="list-style-type: none"> <li>1. Program on input/output stream</li> <li>2. Program on class and objects.</li> <li>3. Program on Inline/Friend functions.</li> <li>4. Course Objectives					
<b>1</b>	To define the significance of Python in programming				
<b>2</b>	To discuss the programming paradigms in Python				
<b>3</b>	To make use of the different libraries of Python				
Course Outcomes (CO) with Bloom's Taxonomy Level					
At the end of the course, the students will be able to,					
<b>CO1</b>	Implement the programming constructs in Python				Apply
<b>CO2</b>	Analyse built in model in Python programming				Analyse
<b>CO3</b>	Design application using Python libraries				Create
Module	Module Contents				Hours
I	<b>Introduction to Python:</b> The basic elements of python, Branching Programs, Control Structures, Strings and Input, Iteration, Functions and scoping, Specifications, Recursion, Global variables.				4
II	<b>Advanced features of Python:</b> Modules, Files, System Functions and Parameters, Strings, Tuples, Lists and Dictionaries, Lists and Mutability, Functions as Objects.				4
III	<b>Classes and Object-Oriented Programming:</b> Abstract Data Types and Classes, Inheritance, Encapsulation and Information Hiding.				4
IV	<b>Python-Numpy and Pandas:</b> <b>NumPy:</b> Introduction, Numpy array, Numpy array indexing, Numpy operations. <b>Pandas:</b> Series, Data frames, managing missing data, groupby, merging & concatenation, operations, data input and data output.				6
V	<b>Python for Data Visualization:</b> Data Visualization through libraries like: Matplotlib, Seaborn, Plotly and Cufflinks, Geographical Plotting.				4
VI	<b>Text mining modelling using NLTK:</b> Text Corpus, Sentence Tokenization, Word Tokenization, Removing special Characters, Expanding contractions, Removing Stopwords, Correcting words: repeated characters, Stemming & lemmatization, Part of Speech Tagging, Feature Extraction, Bag of words model, TF-IDF model, Text classification problem				6
List of Experiments / Lab Activities					

1. Problem solving using core Python functionality like strings, variables, functions.
2. Problem solving using core Python functionality like tuples, dictionary, list, objects
3. Problem solving using Class & object concepts.
4. Problem statement on inheritance in classes
5. Problem based on encapsulation in classes
6. Problem statement on array
7. Problem statement on NumPy libraries with different operations
8. Problem statement on Pandas libraries with different operations
9. Problem statement on data visualization using Matplot Libraries.
10. Problem statement on data visualization using Seaborn Libraries.
11. Problem statement on text mining application using NLTK

## SY SEM-II

Walchand College of Engineering, Sangli (Government Aided Autonomous Institute)					
AY 2021-22					
Course Information					
Programme	B.Tech. (Information Technology)				
Class, Semester	Second Year B. Tech., Sem IV				
Course Code	SET221				
Course Name	Theory of Computation				
Desired Requisites:	Discrete Mathematics				
Teaching Scheme		Examination Scheme (Marks)			
Lecture	3 Hrs/week	T1	T2	ESE	Total
Tutorial	-	20	20	60	100
Practical	-				
Interaction	-	Credits: 3			
Course Objectives					
1	To discuss fundamentals of computer mathematics				
2	To describe grammar, languages and their relationships				
3	To impart automata designs as language descriptors and recognizers				
Course Outcomes (CO) with Bloom's Taxonomy Level					
At the end of the course, the students will be able to,					
CO1	Outline problem formulation with relevant solving approaches.				Understand
CO2	Distinguish language-based problems into suitable classes.				Analyze
CO3	Design abstract machines for language recognition and applications.				Create
Module	Module Contents				Hours
I	<b>Proofs and Regular Languages</b> Types of Proofs, Mathematical Induction and Recursive definitions, Regular expressions & Regular languages, Operations on Regular languages				6
II	<b>Finite State Machines</b> Deterministic Finite Automata (DFA) representation, DFA design examples, Nondeterministic finite automata (NFA), NFA with Null ( $\epsilon$ ) transitions, Equivalence of DFAs, NFAs and NFA- $\epsilon$ s. Kleene's Theorem & Proofs, Minimization of DFA				8
III	<b>Grammars &amp; Languages</b> Definition and Types of grammars and languages, Derivation trees and ambiguity, Context Free Languages (CFL) & Non CFL's., Union, Concatenation and Kleene's operations, Intersection and complements of CFLs, Pumping Lemma.				6
IV	<b>Push Down Automata (PDA)</b> Definition, Deterministic PDA, Types of acceptance and conversions to each other, PDA design examples, CFGs & PDAs., Top-Down, & Bottom-up parsing				7
V	<b>Chomsky Normal Form (CNF)</b> Context Free Grammar (CFG) & CNF notations, eliminating $\epsilon$ production and unit productions from a CFG, Eliminating useless variables from CFG, CNF Significance, Applications				4
VI	<b>Turing Machines (TM)</b> Models of Computation, definition of TM as Language Acceptor, Combining TMs, Turing computable functions, TM design examples, Variations in TM, nondeterministic TM, and Universal TM.				8

<b>CO3</b>	2	3											1	

The strength of mapping is to be written as 1,2,3; Where, 1:Low, 2:Medium, 3:High  
Each CO of the course must map to at least one PO.

Assessment
The assessment is based on 2 in-semester examinations in the form of T1 (Test-1) and T2 (Test-2) of 20 marks each. Also there shall be 1 End-Sem examination (ESE) of 60 marks. T1 shall be typically on modules 1 and 2, T2 based typically on modules 3, 4 and ESE shall be on all modules with nearly 50% weightage on modules 1 to 4 and 50% weightage on modules 5, 6.

Assessment Plan based on Bloom's Taxonomy Level

Course Information					
Programme	B.Tech. (Information Technology)				
Class, Semester	Second Year B. Tech., Sem IV				
Course Code	5IT223				
Course Name	Computer Networks				
Desired Requisites:	Data Communication and Networking				
Teaching Scheme		Examination Scheme (Marks)			
Lecture	3 Hrs/week	T1	T2	ESE	Total
Tutorial	-	20	20	60	100
Practical	-				
Interaction	-	Credits: 3			
Course Objectives					
1	To provide fundamental knowledge of Computer networks				
2	To instruct the transport and application layer services				
3	To compare wireless and mobile technologies				
Course Outcomes (CO) with Bloom's Taxonomy Level					
At the end of the course, the students will be able to,					
CO1	Explain fundamentals of computer networks				Understand
CO2	Utilize functions of various layers and protocols for network services				Apply
CO3	Differentiate wired and wireless technologies in computer network				Analyze
Module	Module Contents				Hours
I	<b>Data link layer</b> Framing, error control, flow control, The Channel Allocation Problem: Static & Dynamic Allocation, Multiple Access Protocols- ALOHA, CSMA, CSMA/CD. Ethernet Cabling, Coding, MAC Protocol, Frame structure, Binary exponential Back-Off Algorithm.				7
II	<b>Network Layer</b> Network Layer Design issues- Packet Switching, Services to transport layer, implementation of connection oriented & connectionless services, Routing- Static & Dynamic routing, flooding, Fragmentation. Congestion Control Algorithms Principles, Prevention Policies, Jitter & Load shedding. The Network Layer in the Internet- Address, Internet Control Protocols- SPF, BGP, IP operations, Subnetting , IP4, IPv6.				7
III	<b>Transport Layer</b> Elements of transport protocol- Addressing, connection establishment, release, flow control, buffering, multiplexing, crash recovery. UDP, RPC, RTP.				6
IV	<b>Transport Layer Protocol</b> TCP service model, TCP protocol, TCP segment header, TCP connection establishment, Release, congestion control in TCP, timer management.				6
V	<b>Application Layer</b> DNS—The Domain Name System-name space, resource records, name servers. Electronic Mail- architecture and service, user agent, message format and transfer final delivery. The World Wide Web-architecture overview, Application layer protocol: HTTP, FTP, SMTP.				7
VI	<b>Wireless and Mobile Technologies</b> Mobile technologies: GSM/GPRS, Introduction, Fundamentals of Satellite systems, Broadband satellite Networks.				6

Course Objectives					
1	To introduce the object-oriented concepts of Java				
2	To inculcate the Java APIs like multithreading and socket programming				
3	To instruct about various applications of the GUI packages of Java				
Course Outcomes (CO) with Bloom's Taxonomy Level					
At the end of the course, the students will be able to,					
CO1	Demonstrate the object-oriented features				Apply
CO2	Analyze the concepts of event handling and multi-threading				Analyse
CO3	Create to design solution for using appropriate GUI				Create
Module	Module Contents				Hours
I	<b>Fundamental Programming in Java</b> Structure of Java Program, Java programming environment-JVM, JIT Compiler, Bytecode, A simple Java program, source file declaration rules, naming conventions, objects and classes – declaring classes and objects, declaring member variables, defining methods, constructors, using objects, this keyword, final and static keyword, garbage collection				3
II	<b>Inheritance and package</b> What is inheritance, types of inheritance, interfaces, super keyword, final classes and methods, packages – importing packages, naming a package, creating a package				2
III	<b>Exception Handling and I/O</b> Exception handling – what is exception? dealing with errors, hierarchy of exception, types of exceptions, IO stream classes				2
IV	<b>Event Handling, AWT and Swing</b> Event handling – basics of event handling, AWT hierarchy, types of events, AWT components, swing advanced components.				2
V	<b>Multithreading and Networking</b> Processes and threads, runnable interface, thread class, thread objects, thread states, thread priorities, socket programming				2
VI	<b>Database Handling and Collections Framework</b> Database – design of JDBC, the structured query language, JDBC types, Driver Manager - statement, connection, result-set, Collections - Collection framework				2
List of Experiments / Lab Activities					

**List of Experiments:**

1. Program on input/output stream.
2. Program on class and objects.
3. Program on Constructor/Destructors.
4. Program static variables/class/functions.
5. Program on polymorphism.
6. Program on different types of inheritance and interface.
7. Program on exception handling objects.
8. Program on multithreading.
9. Program on TCP/UDP communication.
10. Program on Swing components.
11. Program on AWT components.
12. Program on Database Connectivity and operations for data handling.
13. Program on different collections like TreeSet, Set, HashMap, ArrayList, Date, etc.

1	To introduce the android architecture and tools for developing Android applications				
2	To impart current client side and server side web technologies on Android platform				
3	To provide user interface application development				
Course Outcomes (CO) with Bloom's Taxonomy Level					
At the end of the course, the students will be able to,					
CO1	Develop Android application using suitable tools and frameworks				Applying
CO2	Create graphical user interfaces using different advanced components				Analyzing
CO3	Design solution for user activities and handling database				Creating
Module	Module Contents				Hours
I	<b>Android Overview</b> Overview of Android, History, Android Versions, Android OS stack: Linux kernel, Native Libraries/DVM, Application Framework, Applications, Activity, Activity lifecycle, Fragments, Activity Back Stack, Process and Threads, Android SDK, Android Emulator.				2
II	<b>Intents and Layouts</b> XML, Android View Hierarchies, Linear Layouts, Relative Layout, Table Layout, Frame Layout Sliding, Using Padding and Margins with Layouts. What is Intent? Android Intent Messaging via Intent Objects, Types of Intents, Using Intents with Activities, Sending Intents (Telephony, SMS), Broadcast Receivers				2
III	<b>Input Controls, Input Events, Dialogs</b> Buttons, Text Fields, Checkboxes, Radio Buttons, Toggle Buttons, Spinners, Event Listeners, Event Handlers, Touch Mode, Handling Focus, Dialogs: Alerts, Popups, Toasts				3
IV	<b>Menus, Notification and ActionBar</b> Menus, Options menu, Context menu, Popup menu, Handling menu click events, Creating a Notification, Notification actions, Notification priority, Managing Notifications, Removing notifications				2
V	<b>Android Database</b> Installing SQLite plugin, DbHelper, The Database Schema and Its Creation, Four Major Operations, Cursors, Example, overview of other database used for Android				2
VI	<b>Android/ Flutter/ iOS</b> Flutter – user interface, data and back-end, accessibility, platform integration, packages and plugins, tools and features, Kotlin – Kotlin overview, multiplatform programming, platforms, standard library, official libraries, tools, iOS – SwiftUI Essentials, views, navigation and model presentation, passing data, state management, persistent, drawing -, etc.				2

### List of Experiments / Lab Activities

#### List of Experiments:

1. Installation of Android SDK, emulator, creating simple project and study of android project structure.
2. Installing apk on mobile device/tablet, configuring mobile device/tablet in Android Studio with developer option and running app directly on mobile device/tablet.
3. Write a program to use of different layouts.(Create Login form using Linear Layout and Relative Layout).
4. Write a program to study Intents for switching between activities. - Create Registration Activity and Registration Layout
5. Write a program to use of Intents for SMS and Telephony
6. Write a program to study and demonstrate BroadcastReceiver
7. Write a program to demonstrate Buttons, Text Fields, Checkboxes, Radio Buttons, and Toggle Buttons with their events handler (Create an app which will cover the different components, and try adding the components and different events henceforth so as to create a fully developed Android application)
8. Write a program to demonstrate Spinners, Touch Mode, Alerts, Popups, and Toasts with their events handler
9. Write a program to demonstrate Touch Mode, Menus with their events handler
10. Write a program to demonstrate notification with their action
11. Write a program to study and use of SQLite database
12. Study of publishing app to the Android Market.

#### CO-PO Mapping

	Programme Outcomes (PO)												PSO	
	1	2	3	4	5	6	7	8	9	10	11	12	1	2
<b>CO1</b>		2		1										
<b>CO2</b>									2					
<b>CO3</b>					2									1

The strength of mapping is to be written as 1,2,3; Where, 1:Low, 2:Medium, 3:High  
Each CO of the course must map to at least one PO.

#### Assessment

There are three components of lab assessment, LA1, LA2 and Lab ESE.

IMP: Lab ESE is a separate head of passing. LA1, LA2 together is treated as In-Semester Evaluation.

Assessment	Based on	Conducted by	Typical Schedule (for 26-week Sem)	Marks
------------	----------	--------------	------------------------------------	-------

LA1	Lab activities, attendance, journal	Lab Course Faculty	During Week 1 to Week 6 Marks Submission at the end of Week 6	30
LA2	Lab activities, attendance, journal	Lab Course Faculty	During Week 7 to Week 12 Marks Submission at the end of Week 12	30
Lab ESE	Lab activities, attendance, journal	Lab Course Faculty	During Week 15 to Week 18 Marks Submission at the end of Week 18	40
<p>Week 1 indicates starting week of a semester. The typical schedule of lab assessments is shown, considering a 26-week semester. The actual schedule shall be as per academic calendar. Lab activities/Lab performance shall include performing experiments, mini-project, presentations, drawings, programming and other suitable activities, as per the nature and requirement of the lab course. The experimental lab shall have typically 8-10 experiments.</p>				

<b>Assessment Plan based on Bloom's Taxonomy Level</b>				
<b>Bloom's Taxonomy Level</b>	<b>LA1</b>	<b>LA2</b>	<b>Lab ESE</b>	<b>Total</b>
Remember	Not Allowed	Not Allowed	Not Allowed	Not Allowed

Apply	20	20	20	<b>60</b>
Analyze	5	5	10	<b>20</b>
Evaluate		5	5	<b>10</b>
Create			5	<b>5</b>
<b>Total</b>	<b>30</b>	<b>30</b>	<b>40</b>	<b>100</b>

Walchand College of Engineering, Sangli (Government Aided Autonomous Institute)					
AY 2021-22					
Course Information					
Programme	B.Tech. (Information Technology)				
Class, Semester	Second Year B. Tech., Sem IV				
Course Code	5IT276				
Course Name	Mini Project-1				
Desired Requisites:	Programming fundamentals				
Teaching Scheme		Examination Scheme (Marks)			
Lecture	-	LA1	LA2	Lab ESE	Total
Tutorial	-	30	30	40	100
Practical	2 Hrs/Week				
Interaction	-	Credits: 1			
Course Objectives					
1	To provide guidance to select & build the ideas				
2	To find real-world challenges by IT based Solution				
3	To inculcate team spirit in students by project management				
Course Outcomes (CO) with Bloom's Taxonomy Level					
At the end of the course, the students will be able to,					
CO1	Explore the concepts of programming languages, tools and technologies				Apply
CO2	Survey the real-world challenges to define problem statement				Evaluate
CO3	Design project modules to report solutions to various problems.				Create
List of Experiments / Lab Activities					
Mini-project is to be carried out in a group of maximum 3 to 5 students. Each group will carry out mini-project on developing any application software based on following areas.					
1. C/C++/Python or any equivalent language.					
2. Industry Problem Statement (Sponsored Project)					
3. Problem statements based on current or previously learned Technology.					
Project/Mini-Project group should submit workable project at the end of second semester. Project report (pre-defined template) should be prepared using Latex/Word and submitted along with soft copy on CD/DVD (with code, PPT, PDF, Text report document & reference material) or on online Github. Students should maintain a project log book containing weekly progress of the project.

## Walchand College of Engineering, Sangli

(Government Aided Autonomous Institute)

**AY 2020-21**

### Course Information

<b>Programme</b>	B.Tech. (Information Technology)
<b>Class, Semester</b>	Second Year B. Tech., Sem IV
<b>Course Code</b>	SIT277
<b>Course Name</b>	Presentation and Report Writing
<b>Desired Requisites:</b>	

### Teaching Scheme

### Examination Scheme (Marks)

Lecture	-	LA1	LA2	ESE	Total
<b>Tutorial</b>	-	30	30	40	100
<b>Practical</b>	-				
<b>Interaction</b>	1 Hr/week	<b>Credits: 1</b>			

### Course Objectives

<b>1</b>	To convey ethical guidelines during technical content preparation and presentation
<b>2</b>	To use various report writing tools
<b>3</b>	To provide various relevant practices of presentation and report/paper writing

### Course Outcomes (CO) with Bloom's Taxonomy Level

At the end of the course, the students will be able to,

<b>CO1</b>	Use appropriate charts, tables and figures in presentation and report	Apply
<b>CO2</b>	Compare and identify suitable tools towards practicing write-up and presentation	Analyse
<b>CO3</b>	Create effective report and presentations of the technical work	Create

### List of Experiments / Lab Activities

#### List of Experiments:

#### PART – A Technical Report Writing

1. Experiment 1: Writing technical reports using proper Tense and grammar.
2. Experiment 2: Study of various types of technical Reports  
Project report, Conference paper, Journal Paper, Intellectual Property Rights (IPR),  
Selection of paper type for possible publication.
3. Experiment 3: Study of technical report Structure - I  
Preamble, Abstract, Literature review/survey, Problem statement, Objectives
4. Experiment 4: Study of technical report Structure – II  
Methodologies, Results, Discussions, Conclusion, Acknowledgements
5. Experiment 4: Use of Bibliographies/references and proper citations in reports.
6. Experiment 5: Use of Citations, referring style and method of using citations.
7. Experiment 6: Study of Plagiarism
  - a. Checking plagiarism, b. Minimizing plagiarism

#### PART – B Presentation

8. PPT's and Animations
9. Presentation structure, Number of slides and Time management
10. Presentation styles
11. Figures and Tables for data representations

#### Part –C Tools and Practices

12. MS Office, Open Office, Latex, Beamer, Flash, GNU Plot etc.
13. End Note; Mendeley, Grammarly, Ginger, 1 Checker, Turnitin etc.
