	Interpretation. Analyse your results and draw conclusions.	
IV	Research Practices Effective literature studies approaches, critical analysis, Plagiarism, Research ethics, Mendeley - Reference Management Software. Research communication- Effective Technical Writing, Writing a research article for Journal/conference paper, Technical report, Dissertation/ Thesis report writing, Software used for report writing such as WORD, Latex etc. Presentation techniques for paper/report/seminar. Publishing article in Scopus/SCI/Web of science indexed journal or conference.	7
V	Intellectual Property Rights (IPR) Nature of Intellectual Property: Patents, Designs, Trade and Copyright, Ownership of copyright, Term of copyright, Technological research, innovation, patenting, development. International Scenario: International cooperation on Intellectual Property. New developments in IPR, Traditional knowledge ,Various Case Studies.	7
VI	Patents Patent Rights: Scope of Patent Rights. Various Patent databases. Geographical Indications. Procedure for grants of patents, Patenting under PCT. Licensing and transfer of technology. Administration of Patent System. Introduction to International Scenario: WIPO, TRIPs, Patenting under PCT	6

	Programme Outcomes (PO)					
	1	2	3	4	5	6
CO1	3		1			
CO2			2	3	2	
CO3		3		2		2

Assessment

The assessment is based on MSE, ISE and ESE.

MSE shall be typically on modules 1 to 3.

ISE shall be taken throughout the semester in the form of teacher's assessment. Mode of assessment can be field visit, assignments etc. and is expected to map at least one higher order PO.

ESE shall be on all modules with around 40% weightage on modules 1 to 3 and 60% weightage on modules 4 to 6.

For passing a theory course, Min. 40% marks in (MSE+ISE+ESE) are needed and Min. 40% marks in ESE are needed. (ESE shall be a separate head of passing)

Walchand College of Engineering, Sangli (Government Aided Autonomous Institute) AY 2023-24 **Course Information** M.Tech. (Mechanical Production Engineering) **Programme** Class, Semester First Year M. Tech., Sem - I **Course Code** 7PR502 Course Name Advanced Joining Technology **Desired Requisites: Teaching Scheme Examination Scheme (Marks)** 3 Hrs/week **MSE** Total Lecture ISE **ESE** Tutorial 30 20 100 50 Credits: 3 **Course Objectives** To impart knowledge of permanent joining processes and their applications. 1 To develop the student to select the proper welding process. 3 To develop problem-solving skills through the use of weld design and welding quality. Course Outcomes (CO) with Bloom's Taxonomy Level At the end of the course, the students will be able to, Bloom's Bloom's CO **Course Outcome Statement/s Taxonomy** Taxonomy Level Description CO₁ Distinguish conventional and modern welding processes. II Understanding CO₂ Exploit the methodology for optimized choice of material, Applying Ш consumables, welding process and parameters for weld quality **CO3** Investigate physics, chemistry and metallurgy of welding for Analyzing IV weld quality/ defects reduction. Module **Module Contents** Hours Introduction, Importance and application of welding, classification of welding process. Selection of welding process. Welding vs. other Joining 6 I processes, Weld joints, weld symbols, Joint design. Brief review of conventional welding process, Gas welding, Arc welding, MIG, TIG welding. Resistance welding. Electro slag welding, Friction II welding, Friction Stir Welding-Metal flow phenomena, tools, process 7 variables and applications, Friction Stir Processing- Process, Application, Heat affected zone. Advanced welding Techniques, Principles, working and applications of advanced welding techniques such as Plasma Arc welding, Laser beam Ш welding, Electron beam welding, Ultrasonic welding, Diffusion bonding, 7 Atomic hydrogen welding, Explosive welding, Underwater welding, Spraywelding, High Temperature Solid-State Welding. Physics and Metallurgy of Welding, General considerations, structure of the weld metal, weld composition, HAZ, Weldability, Fracture behaviour, Weldability tests, Welding residual stresses - causes, occurrence, effects and measurements - thermal and mechanical relieving; types of distortion factors affecting distortion - distortion control methods. IV 7 Techniques of soldering, solders, phase diagram, composition, applications Brazing: Wetting and spreading characteristics, surface tension and contact

angle concepts, brazing fillers, role of flux and characteristics, atmospheres

for brazing, adhesive bonding Cladding, Surfacing and Cutting.

V	Welding of Specific Alloys, Welding of Cast Iron, Copper alloys, Al alloys,

Tech., Sem - I **Course Code** 7PR503 Course Name Industrial Automation and Mechatronics **Desired Requisites: Teaching Scheme Examination Scheme (Marks)** 3 Hrs/week MSE Lecture ISE **ESE** Total Tutorial 30 20 100 50 Credits: 3 **Course Objectives** To train the students in the area of instrumentation, automation and control system. 1 To select suitable major control components required to automate a process or system. 2 To develop competent mechanical engineers with comprehensive knowledge of mechatronics to 3 enable them to apply the relevant knowledge and technologies for the design and realization of innovative systems and products Course Outcomes (CO) with Bloom's Taxonomy Level At the end of the course, the students will be able to. Bloom's Bloom's CO **Course Outcome Statement/s Taxonomy** Taxonomy Level Description CO₁ Outline potential areas of automation and justify need for Understanding II automation. Translate and simulate a real time activity using modern tools and CO₂ Applying IIIdiscuss the benefits of automation.. Appraise the importance of integration of Mechanical, Electronics CO₃ Analyzing IV and Control in the design of Mechatronics system. Module **Module Contents** Hours Introduction Concept and need of automation, mechanization and automation, Automation in Production System, Principles and Strategies of Automation, I 6 Basic Elements of an Automated System, Advanced Automation Functions, Levels of Automations. Flow lines & Transfer Mechanisms, Fundamentals of Transfer Lines. (SLE: Analysis of Transfer Lines). **Hvdraulic & Pneumatic system** Hydraulic & Pneumatic system Comparison – ISO symbols for fluid power elements, Hydraulic, pneumatics system – Selection criteria. Hydraulic system components selection and specification characteristics - Linear II 7 actuator- construction. Reservoir capacity, heat dissipation, accumulators standard circuit symbols, circuit (flow) analysis. Direction, flow and pressure control valves-operating characteristics-electro hydraulic servo valves-types, characteristics and performance. **Control System** Industrial Control Systems, Process Industries Versus Discrete-IIIManufacturing Industries, Continuous Versus Discrete Control, Computer 6

Process and its Forms. Introduction to Mechatronics, Overview, Scope,

Importance, Evolution, Interdisciplinary approach,

IV	Sensors and Transducers Definition and classification of transducers, Definition and classification of sensors, Various types, Principle of working of each, Applications Analog signal conditioning and processing, Operational amplifiers, Digital signal conditioning, Introduction to counters, timer, A/D converter, D/A converter Digital logic, Number systems, Logic gates, Boolean algebra, Application of logic gates, Sequential logic, Flip flop, D flip flop, JK flip flop, Master slave flip flop	7	
	Microprocessors and Microcontrollers		
V	General definitions of microprocessors and micro controllers, Similarities and Dissimilarities microprocessors and microcontrollers. Basic Architecture and characteristics of microprocessors, Interfacing of microprocessors with RAMs, ROMs. Introduction to peripheral-interfacing, INTEL 8085 Microprocessor: Pin Functions, Architecture, Addressing Modes, Instruction Set, Timing Diagrams, Interrupts, Programming Examples	7	
	Programmable Logic Controllers		
VI	Programmable Logic Controllers (PLC) based control system, programming languages & instruction set, ladder logic, functional blocks, structured text, and applications. Human Machine Interface (HMI) & Supervisory Control and Data Acquisition System (SCADA); motion controller, applications of RFID technology and machine vision.	6

	CO-PO Mapping					
		Programme Outcomes (PO)				
	1	2	3	4	5	6
CO1	2				2	
CO2			3		2	
CO3	1				2	
The strength of mapping is to be written as 1,2,3; Where, 1:Low, 2:Medium, 3:High						

Each CO of the course must map to at least one PO.

Assessment

The assessment is based on MSE, ISE and ESE.

MSE shall be typically on modules 1 to 3.

ISE shall be taken throughout the semester in the form of teacher's assessment. Mode of assessment can be field visit, assignments etc. and is expected to map at least one higher order PO.

ESE shall be on all modules with around 40% weightage on modules 1 to 3 and 60% weightage on modules 4 to 6.

Walchand College of Engineering, Sangli

(Government Aided Autonomous Institute)

AY 2023-24

	Course information
Programme	M. Tech. (Mechanical Production Engineering)
	T

Class, Semester First Year M. Tech., Sem I

Course Code 7PR551

Course Name Manufacturing Processes Lab

Desired Requisites:

Teaching Scheme			Examination	Scheme (Marks)				
Practical	2 Hrs/Week	LA1	LA1 LA2 ESE Total					
Interaction	-	30	30	40	100			
		Credits: 1						

Course Objectives

- To provide advanced knowledge and expertise in order to produce creative and imaginative engineers with a strong scientific acumen.
 - To develop ability through hands-on experience for implementing modern methods, techniques and best practices in manufacturing.
- To make aware about current scenario and facilitate with modern trends which are tending towards their own area of interest.

Course Outcomes (CO) with Bloom's Taxonomy Level

At the end of the course, the students will be able to,

СО	Course Outcome Statement/s	Bloom's Taxonomy Level	Bloom's Taxonomy Description
CO1	Demonstrate and illustrate various manufacturing processes and technologies.	III	Applying
CO2	Investigate and justify various manufacturing manufacturing processes and technologies	IV	Analyzing
CO3	Develop and recommend the optimum resources in manufacturing and development area.	VI	Creating

List of Experiments / Lab Activities/Topics

Creation of prototype/ apparatus/ small equipment/experimental set up/ innovation of existing product/ analysis or simulation of a process/ experimental verification of principles in thrust areas of Manufacturing process.

Modu	ıla		Module (Yontonta		Hours
Modu		advetion to fluid		Contents		Hours
I	Introduction to fluid power Introduction to hydraulic- pneumatics system, ISO / JIC Symbols used in fluid power, Hydraulic fluids and their properties, Selection of fluid for hydraulic systems, Effect of temperature on fluids, Criterion for selection of suitable fluid power system, Details of secondary component: Strainers, filters, heat exchanger, seal, Pipes, hoses and fittings, accumulator, intensifier, jack, power.					6
II	Act				r mountings,	7
III	Actuators, Hydraulic motor, Hydraulic cylinders and their mountings, Hydraulic Pumps and its types with details. Hydraulic circuits with application Details of pressure control valve with types, Details of direction control valve with types, Details of flow control valves with types, Pilot operated pressure relief valve with industrial application. Pressure reducing valve with industrial				7	

IV	Pneumatic systems Basic principles and requirements of pneumatic system, Details of secondary component: filters, regulators, lubricators (FRL unit), Mufflers, dyers, piping layout, fitting and connectors, Pneumatic actuators, Rotary and reciprocating, Cylinder – types and their mountings, Details of Air motor, Compare air motor and hydraulic motor.				
	Pneumatic circuits				
V	Maintenance, troubleshooting and safety of pneumatic systems, Servicing of compressed air, Basic pneumatic circuit, impulse operation, speed control, sequencing of motion, time delay circuit, System for linear and rotary motion.	7			
VI	Electro- Pneumatic systems Study of simple logic gates, Turbulence, amplifiers, Pneumatic sensors, applications. Applications of hydro-pneumatic systems, Hydro electrical systems, Design of various hydraulic and pneumatic circuits required for manual, semi-automatic and automatic operations, Electro- Pneumatic system with applications.

Minimum (Least) Material Requirements, their applications; Accumulation of

tolerances (tolerance stacking)

Ш	Machine Tools and Accuracy General concept of accuracy of machine tool, spindle rotation accuracy, displacement accuracy, the philosophy of precision machine design, sources of error on a machine tool, factors affecting work piece accuracy from the point of view of machine design, Accuracy of CNC machines – errors due to input interpolation and servo system; Thermal errors- Sources and transmission of thermal errors in precision machining, error avoidance and compensation, environment control of precision machinery- machine enclosures, room and factory enclosures.	7		
IV	Tool Materials for Precision Machining Classes of tool materials and their properties, coated carbides- laminated, CVD and PVD coated carbides, Cermets, Ceramics - hot pressed, Silicon Nitride and whisker reinforced ceramics, Diamonds – crystallographic planes, natural and synthetic diamonds, polycrystalline diamonds, diamond coated tools, Cubic boron nitrides (CBN), coated CBNs, Tool and work material compatibility and availability	6		
V	Processing and Accuracy Dimensional wear of cutting tools and its influence on accuracy, clamping and setting errors, errors due to location; Surface roughness and microfininshing processes — Terminology, influence of machining parameters on surface roughness, Honing, lapping and super finishing, Process capability — mean, variance, skewness, process capability metrics, Cp, Cpk, Methods for improving accuracy and Surface finish.	7		
VI	Precision Machining Processes Classification of material removal processes in terms of the energy source used and the tool-work piece reaction, influence of machining parameters, work material and tool geometry, Diamond turning and milling – machines, tool design and alignment, Fixed abrasive processes - Basic mechanics of grinding, finish grinding, precision cylindrical, internal and surface grinding bondless diamond grinding wheels, jig grinding, electrolytic in-process dressing, Ultraprecision grinding, nano-grinding; Loose abrasive processes – polishing, modes of material removal. Study of some precision measurement devices,			
	their calibrations methods

#### Assessment

The assessment is based on MSE, ISE and ESE.

MSE shall be typically on modules 1 to 3.

ISE shall be taken throughout the semester in the form of teacher's assessment. Mode of assessment can be field visit, assignments etc. and is expected to map at least one higher order PO.

ESE shall be on all modules with around 40% weightage on modules 1 to 3 and 60% weightage on modules 4 to 6.

CO2	Investigate the selected topic/ system.	IV	Analysing
CO3	Verify the outcomes of the work have solved the specified problems.	V	Evaluating

## List of Experiments / Lab Activities/Topics

#### **Contents:**

The seminar work will start in semester II and should preferably be a problem with research potential and should involve scientific research review, design, generation/collection and analysis of data, determining solution and must preferably bring out the individual contribution. Seminar should be based preferably on the area in which the candidate is interested to undertake the dissertation work. The candidate has to be in regular contact with their guide and the topic of seminar must be mutually decided. The examination shall consist of the preparation of report consisting literature review, detailed problem statement, case studies, etc, according to type of work carried out. The work has to be presented in front of the examiners panel formed by department for evaluation.

# Assessment

The assessment is based on MSE, ISE and ESE.

MSE shall be typically on modules 1 to 3.

ISE shall be taken throughout the semester in the form of teacher's assessment. Mode of assessment can be field visit, assignments etc. and is expected to map at least one higher order PO.

ESE shall be on all modules with around 40% weightage on modules 1 to 3 and 60% weightage on modules 4 to 6.

#### Walchand College of Engineering, Sangli (Government Aided Autonomous Institute) AY 2023-24 **Course Information Programme** M.Tech. (Mechanical Production Engineering) Class, Semester First Year M. Tech., Sem - II **Course Code** 7PR534 Course Name Advanced Tool Design **Desired Requisites: Teaching Scheme Examination Scheme (Marks)** 3 Hrs/week MSE Lecture ISE **ESE** Total Tutorial 30 20 100 50 Credits: 3 **Course Objectives** To develop ability in design of modern tooling systems of the machines and the basic 1 fundamentals in tool design. To design a tooling for given production system/ production machine. 2 To understand the principles related to tool economy and tool life. Course Outcomes (CO) with Bloom's Taxonomy Level At the end of the course, the students will be able to, Bloom's Bloom's CO Taxonomy Taxonomy **Course Outcome Statement/s** Level Description CO₁ Design a tooling for given machine tool. IV Analyzing Know about the ways to minimize the tooling cost. V Evaluating CO₂ CO₃ Design of jigs and fixture for a given job. VI Creating Module **Module Contents** Hours **Introduction to Tool Design** Introduction - Tool Engineering, Tool Classifications, Tool Design Objectives, I Tool Design in manufacturing- Standards in tool design- Tooling Materials-6 Ferrous and Nonferrous Tooling Materials- Carbides, Ceramics and Diamond -Nonmetallic tool materials-Designing with relation to heat treatment. **Theory of Metal Cutting** Mechanics of Metal cutting -Oblique and orthogonal cutting- Chip formation and shear angle, effect of geometrical parameters on tool force, power consumption and surface finish, orthogonal and oblique cutting, angle relationships, chip formation in milling and drilling, the force system in II 7 turning for orthogonal and oblique cutting, force and velocity relationships, frictional force and energy in cutting, cutting force in drilling and milling, fundamental of friction processes in metal cutting, tool wear, machinability and tool life Taylor's tool life equation, Tool life test, effect of variables on tool life, machinability criteria, stress-distribution at the chip-tool interface. **Design of Cutting Tools** Design of single point turning, parting and boring tools, design of form tools, broach design, milling cutter, drill bit of milling cutters, design of Breach, Ш 7 Design of twist Drills. Design of gear and thread milling Cutters. Economics of Machining: Gilbert's model: Minimum cost, Maximum production and

Maximum profit rate.

IV	Design of Jigs and Fixtures  Introduction, Principles of location – Locating methods and devices, Principles of clamping, Drill Jigs, Chip formation in drilling. General considerations in the design of drill jigs, Drill bushings, Methods of construction, Thrust and Turning Moments in drilling, Drill jigs and modern manufacturing, Types of Fixtures – Vise Fixtures, Milling Fixtures, Boring Fixtures, Broaching Fixtures, Lathe Fixtures – Grinding Fixtures – Modular Fixtures, Cutting Force Calculations.	7		
	Design of Press Tool Dies			
V	Types of Dies, Method of Die operation, Clearance and cutting force calculations, Blanking and Piercing die design ,Pilots, Strippers and pressure pads Presswork materials, Strip layout, Shortrun tooling for Piercing – Bending dies – Forming dies – Drawing dies-Design and drafting.	6		
VI	Tool Design for CNC Machine Tools Introduction –Tooling requirements for Numerical control systems Fixture design for CNC machine tools- Sub plate and tombstone fixtures-Universal fixtures Cutting tools– Tool holding methods– Automatic tool changers and tool positioners Tool Pre-setting– General explanation of the Brown and Sharp machine.	6

## Course Outcomes (CO) with Bloom's Taxonomy Level

At the end of the course, the students will be able to,

СО	Course Outcome Statement/s	Bloom's Taxonomy Level	Bloom's Taxonomy Description
CO1	Explain the design concepts, methods, tools, the key technologies	П	Understandi
	and the operation of sustainable manufacturing	11	ng
CO2	Apply the principles, techniques and methods to customize the		
	learned generic concepts to meet the needs of a particular	III	Applying
	industry/enterprise		
CO3	Identify the strategies for the purpose of satisfying a set of given	IV	Analysing
	sustainable manufacturing requirements	1 V	Anarysing
CO4			

Module	Module Contents					
I	Definition of sustainability – Environmental, Economical and Social dimensions of sustainability - Sustainable Development Models – Strong and Weak Sustainability – Defining Development-Millennium Development Goals – Mindsets for Sustainability : Earthly, Analytical, Precautionery, Action and Collaborative – Syndromes of Global Change: Utilisation Syndromes, Development Syndromes, and Sink Syndromes – Core problems and Cross Cutting Issues of the 21 Century -Global, Regional and Local environmental issues – Social insecurity - Resource Degradation –ClimateChange – Desertification	7				
II	History and emergence of the concept of sustainable development - Our Common Future - Stockholmto Rio plus 20- Rio Principles of Sustainable Development - Precautionary Principle- Polluter PaysPrinciple - Role of Civil Society, Business and Government -Natural Step- Peoples Earth Charter - Business Charter for Sustainable Development -UN Global Compact - Agenda 21	6				

III	The Unjust World and inequities - Quality of Life - Poverty, Population and Pollution - CombatingPoverty -Millennium Development Goals, Indicators, Targets, Status and intervention areas - Demographic dynamics of sustainability - Strategies to end Rural and Urban Poverty and Hunger - Sustainable Livelihood Framework- Health, Education and Empowerment of Women, Children, Youth,Indigenous People, Non-Governmental Organizations, Local Authorities and Industry for Prevention,Precaution, Preservation and Public participation	7				
IV	Protecting and Promoting Human Health – Investing in Natural Capital-Agriculture, Forests, Fisheries- Food security and nutrition and sustainable agriculture- Water and sanitation – Biodiversityconservation and Ecosystem integrity –Ecotourism - Urbanization and Sustainable Cities –Sustainable Habitats- Green Buildings - Sustainable Transportation – Sustainable Consumption and Production – Sustainable Mining - Sustainable Energy–Climate Change –Mitigation and Adaptation -Safeguarding Marine Resources - Financial Resources and Mechanisms					
V	Sustainability in global, regional and national context – Rio Plus 20 - Measuring Sustainability – limitations of GDP- Ecological Footprint- Human Development Index- Human Development Report – National initiatives for Sustainable Development	6				
VI	Hurdles to Sustainability - Operational guidelines —Science and Technology for sustainable development —Performance indicators of sustainability and Assessment mechanism — Inclusive Green Growth and Green Economy — National Sustainable Development Strategy Planning — Governance - Science and Technology- Sustainability Education.
