Module	Module Contents	Hours
I	Matrices Rank of matrix, Homogeneous and non-homogeneous linear equations, Eigen values, Eigen vectors, Cayley Hamilton theorem, Diagonalizations of matrices.	6
П	Partial Differentiation and its application Partial derivative, chain rule for partial differentiation, Euler's theorem for homogeneous and non-homogeneous function, Jacobian, Error and approximation, maxima and minima of function of two variables	8
III	Complex Number Polar form of complex number, Argand's diagram, De Moiver's theorem, roots of complex number, Hyperbolic function, relation between circular and hyperbolic function.	7

	First order ordinary differential equation and its application	
IV	Exact, Linear, Bernoulli's equations, Euler's equations, Orthogonal trajectory, applications to simple electric circuit.	7
V	Numerical Solution of Ordinary Differential Equations of first order and first degree: Numerical Solution by (i) Taylor's series method (ii) Euler's method (iii) Medified Ecleric method (ii) Degree Kette function and provide degree	6
	Modified Euler's method (iv) Runge- Kutta fourth order method Calculus	
VI	Rolle's theorem, Mean value theorem, Taylor's and Maclaurin's theorem with remainders	5

Assessment

The assessment is based on MSE, ISE and ESE.

MSE shall be typically on Three modules. (One and half modules from Electrical syllabus and one and half modules from Electronics syllabus)

ISE shall be taken throughout the semester in the form of teacher's assessment. Mode of assessment can be field visit, assignments etc. and is expected to map at least one higher order PO.

ESE shall be on all modules with around 40% weightage on modules up to MSE and 60% weightage on modules after MSE.

Course Information							
Programme	B.Tech.						
Class, Semester	First Year B. Tech. Sem I/II						
Course Code	7CH155						
Course Name	Engineering Chemistry Lab						
Desired Requisites:	Chemistry course at secondary and higher secondary level						

Teaching S	Scheme	Examination Scheme (Marks)							
Practical	2Hrs/ Week	LA1	LA2	Lab ESE	Total				
Interaction	0Hrs/ Week	30	30	40	100				
				Credits: 1					

Course Objectives

To make the student familiar with analytical techniques.

To provide hands on practice of Instrumental and titrimetric analysis.

Course Outcomes (CO) with Bloom's Taxonomy Level

At the end of the course, the students will be able to,

1

2

CO	Course Outcome Statement/s	Bloom's Taxonomy Level	Bloom's Taxonomy Description
CO1	Apply principles of Volumetry/gravimetry to quantitative analysis for water quality parameter, metal and alloys.	Ш	Applying
CO2	Demonstrate use of instrument for quantitative analysis.	III	Applying
CO3	Experiment physical/Chemical characteristics of material. Execute preparation of product.	III	Applying

List of Experiments (Minimum 8 experiments from the following list)

Sr. No	List of Experiments	Hours						
1	Estimation of hardness of water by EDTA method (Complexometric Titration).							
2	Estimation of alkalinity of water (Neutralization Titration).							
3	Estimation of Dissolved Oxygen in water (Iodometric Titration).							
4	Estimation of Chloride content in water (Argentometry).	2 Una anali						
5	Demonstration of pH meter & pH metric titration.	2 Hrs. each						
6	Determination of strength of acid/base by conductometrically.	Expt.						
7								
8								
9	Estimation of copper from Bronze. (Iodometric Titration). Estimation of Zn from Brass (Displacement Titration).							
10	Determination of purity of Iron (Redox Titration).							
11	Determination of viscosity of given liquid. by Ostwald viscometer.							
12	Determination of corrosion rate by weight loss method							
13	Gravimetric estimation of Ba from BaSO ₄ as BaO.							
14	Preparation of Resin							
	List of Topics(Applicable mode):							
	Verification of Calcium content from Cement/ Limestone/Eggs she tablet.	ells/Calcium

	o learn basics, features								
	o acquaint with data tring, pointer, structure			ion makir	ng, looping, fu	inctions, array,			
		se Outcomes (CO)		onomy Lo	evel				
At the end	d of the course, the stu	dents will be able to),						
со	Cou	urse Outcome State	ement/s		Bloom's Taxonomy Level	Bloom's Taxonomy Description			
CO1 Ir	nculcate the various	skills in Problem S	Solving.		II	Understand			
	Demonstrate signif Programming.	icant experience	e with the	Python	III	Applying			
CO3 T	To test and execute the transformed end of the second end of the s	ne Python program	ns and correct syr	ntax and	IV	Analyse			
	0	List of Experimen	ts / Lab Activities	/Topics					

List of Topics (Applicable for Interaction Mode):

Module I: Basics of Problem Solving: General Problem Solving Concepts, Types of Problems, Problem Solving Strategies. **Program Design Tools:** Algorithms, Flowcharts and Pseudo-Codes.

Module II: Python Programming: Writing and Executing Python Program, Variables, Keywords, Identifiers, Constants, Operators & Expressions, Operators, Data Types.

Module III: Decision Control Statements: Conditional Statements: If, If-else, Nested If, If-elseif Statements. **Iterative Statements:** While Loop, For Loop, Do While Loop, Break, Continue, Pass.

Module IV: Functions: Need, Definition, Call, Variable Scope, Return Statement, Lambda or Anonymous Function. **Modules:** Definition, Introduction to packages in Python, Introduction to standard library modules.

Module V: Strings and Operations: Concatenation, Appending, Multiplication and Slicing. Strings are Immutable, Strings Formatting Operator.

Module VI: File Handling: Introduction, File path, Types of files, Opening and Closing files, Reading and Writing files.

List of Experiments:

- 1. Program to simulate simple calculator that performs basic tasks such as addition, subtraction, multiplication and division.
- 2. Program to demonstrate different operators and their order precedence.
- 3. Program to accept the number and Compute a) Square root of number, b) Square of number, c) Cube of number d) Check for prime, d) factorial of number,
- 4. Program to accept a number from user and print digits of number in a reverse order.
- 5. Program to accept two numbers from user and compute smallest divisor and Greatest Common Divisor of these two numbers.
- 6. Program to find whether the number is positive / negative / zero using conditional statement.
- 7. Programs to show different types of iteration / loop.
- 8. Program to accept N numbers from user and compute and display maximum in list, minimum in list, sum and average of numbers.
- 9. Program to print the Fibonacci Series (with & without recursion).
- 10. Program to swap two number using function.
- 11. Program to accepts a string from user and perform following string operations, a) Calculate length of string, b) String reversal, c) Check palindrome,
- 12. Program to demonstrate different file handling functions.
- 13. Program to copy contents of one file to other.

Assessment

The assessment is based on MSE, ISE and ESE.

MSE shall be typically on modules 1 to 3.

ISE shall be taken throughout the semester in the form of teacher's assessment. Mode of assessment can be field visit, assignments etc. and is expected to map at least one higher order PO.

ESE shall be on all modules with around 40% weightage on modules 1 to 3 and 60% weightage on modules 4 to 6.

Modu	le wise Measurable Students Learning Outcomes :
The st	udent will learn :
• Diffe	erent engineering measurement techniques.
• basic	e manufacturing techniques applicable for production.
• Diffe	erent joining and fabrication techniques.
• high	-precision non-conventional machining processes.
• Back	ground of design processes using CAD.
• autor	mation in manufacturing.

		CO-PO Mapping For Mechanical Engineering Department Programme Outcomes (PO)												PSO	
	1	1 2 3 4 5 6 7 8 9 10 11 12												2	
CO1	3				2					1		1	2		
CO2			2												
CO3					3					1					

The strength of mapping is to be written as 1,2,3; Where, 1:Low, 2:Medium, 3:High

Assessment

The assessment is based on MSE, ISE and ESE.

MSE shall be typically on modules 1 to 3.

ISE shall be taken throughout the semester in the form of teacher's assessment. Mode of assessment can be field visit, assignments etc. and is expected to map at least one higher order PO.

ESE shall be on all modules with around 40% weightage on modules 1 to 3 and 60% weightage on modules 4 to 6.

For passing a theory course, Min. 40% marks in (MSE+ISE+ESE) are needed and Min. 40% marks in ESE are needed. (ESE shall be a separate head of passing)

Assessment

The assessment is based on two In-semester evaluations (LA) of 30 marks each, one End-semester examination (ESE) of 40 marks.

LA1 and LA2 are based on the modules taught (typically Module 1-3) and ESE is based on all modules with 30-40% weightage on modules before LA1 and 60-70% weightage on modules LA2.

	e components of lab as is a separate head of j		A2 and Lab ESE. 2 together is treated as In-Semester Eva	luation.	
Assessment	Based on	Conducted by	Typical Schedule (for 26-week	Marks	
			Sem)		
LA1	Lab activities, attendance, journal	Lab Course Faculty	During Week 1 to Week 6 Marks Submission at the end of Week 6	30	
LA2	Lab activities, attendance, journal	Lab Course Faculty	During Week 7 to Week 12 Marks Submission at the end of Week 12	30	
Lab ESE	Lab activities,	Lab Course	During Week 15 to Week 18 Marks Submission at the end of	40	

Week 1 indicates starting week of a semester. The typical schedule of lab assessments is shown, considering a 26-week semester. The actual schedule shall be as per academic calendar. Lab activities/Lab performance shall include performing experiments, mini-project, presentations, drawings, programming and other suitable activities, as per the nature and requirement of the lab course. The experimental lab shall have typically 8-10 experiments.

ш	Modules 3. Water Chemistry - Natural sources of water, Impurities in natural water. Water quality parameters Hardness- Definition, Causes, Types, Expressing hardness, units to measure hardness, Numerical problems on hardness calculation, ill effects of hard water in steam generation, Alkalinity, Chloride, Dissolved oxygen(DO), Biological Oxygen Demand (BOD) and Chemical Oxygen Demand (COD) its significance. Ion exchange method of water softening.	7
IV	Module 4 : Corrosion Science Definition of corrosion, Types of corrosion, Dry & wet corrosion, Electrochemical & Galvanic series & its importance, Mechanism of Hydrogen evolution and Oxygen absorption corrosion, Factors influencing rate of corrosion, Various methods for protection from corrosion viz. Surface coatings(Electroplating, Galvanizing, Tinning) Cathodic and Anodic protection.	7
v	Thermal analysis and its types, Thermal events, Thermal analysis methods Thermo gravimetric Analysis (TGA), Differential Thermal Analysis (DTA)and Differential Scanning Calorimetry (DSC) w.r.t. Principle, instrumentation, and applications, Interpretation of Thermogram, % weight loss TGA numericals	6
VI	Module 6: Ceramic and Metallic materials Engineering materials and its classification, Ceramics – definition, classification, properties, Portland cement – Chemical and compound composition, Mechanism of setting and hardening. Account of rapid setting, high alumina and high early strength cement by modifying compound composition. Alloy and purposes of alloying, Carbon Steel it's types Low, Medium, High, Brass it's general properties, Properties and uses of Cartridge, Admiralty, Muntz Metal, Leaded Duralumin, Bronzes general properties, Properties and uses of Phosphor Bronze, Aluminium Bronze, Gun Metal, Silicon Bronze.	6

Assessment

The assessment is based on MSE, ISE and ESE.

MSE shall be typically on modules 1 to 3.

ISE shall be taken throughout the semester in the form of teacher's assessment. Mode of assessment can be field visit, assignments, surprise or declared test etc.

ESE shall be on all modules with around 40% weightage on modules 1 to 3 and 60% weightage on modules 4 to 6.

For passing a theory course, Min. 40% marks in (MSE+ISE+ESE) are needed and Min. 40% marks in ESE are needed. (ESE shall be a separate head of passing)

(Dr. Dodla S.Rao) A-A- Powar (K.V. Mashale) (FORD. V.B. crizyaontar)
